

LOST WATER IS LOST OPPORTUNITY

March 16, 2016

As California struggles to recover from record drought conditions, environmental regulations to protect fish continue to force hundreds of thousands of acre feet of precious water to be flushed out to the ocean. Stormwater flows that could be captured, stored, and utilized for parched cities and farms are now simply being lost to the ocean.

Meanwhile, *residents, farms and businesses* are asked to **CUT BACK** and there is no scientific evidence to show endangered fish populations are benefitting.

THIS WEEK WE HAVE LOST...

SO FAR THIS YEAR WE HAVE LOST...

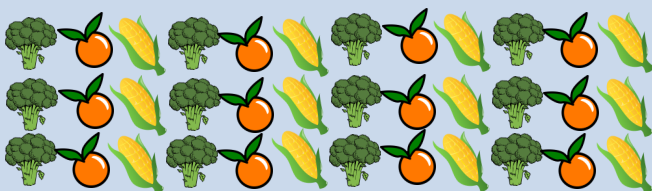

79,000 ACRE FEET

727,000 ACRE FEET

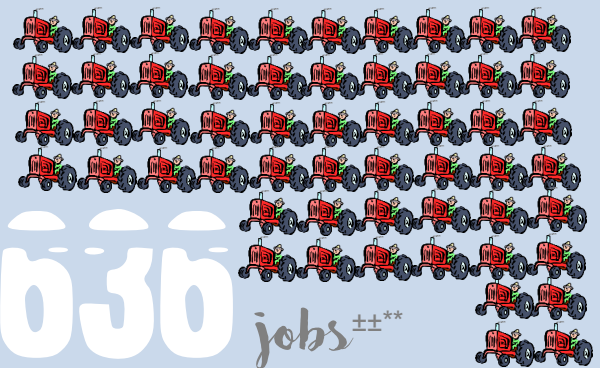

DUE TO ENVIRONMENTAL RESTRICTIONS TO PROTECT FISH

Enough Water for...

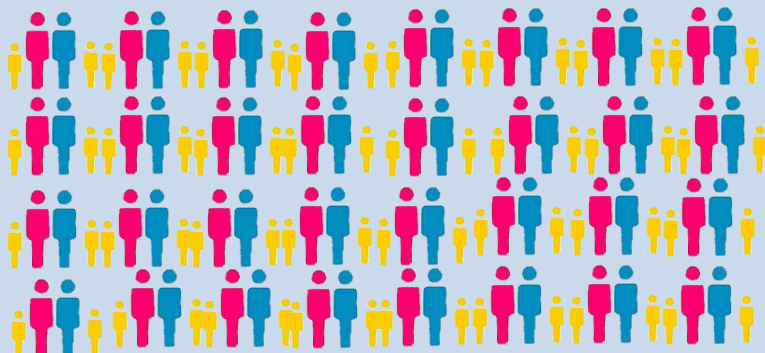

181,750 acres of productive farmland[±]

&

5,636 jobs^{±±±}

Enough Water for

1,615,556

families for 1 year^{±±±±±}

COALITION FOR A SUSTAINABLE DELTA
SOLVING THE SACRAMENTO-SAN JOAQUIN DELTA CRISIS

***The average American family of four consumes

*Assumes three-four acre feet of water is used on each acre of farmland
±One character equal to approximately 5,000 acres
±±Assumes 129 af of lost water results in 1 lost job
±±±One character equal to approximately 100 lost jobs
±±±±One character equal to approximately 50,000 families
